## KEY FEATURES

- 4 channel amplifier
- 2000 W per channel at 4 ohms
- Versatile, compact and highly energy-efficient
- Optional Dante networked audio

## DESCRIPTION

The DX-80 is a four channel amplifier offering 2000 W per channel at 4 ohms. It combines the impressive audio power and performance with ultra-flexible connectivity for both remote control and audio.

Accepting analogue, or optional Dante networked audio, this extra connectivity means that the DX Series non-DSP models can also be used in installation systems which already have a centralized DSP core but require the flexibility of being able to pick up multiple channels of audio from a network.
